10 GitHub repos that Anthropic, OpenAI, and Google quietly open-sourced in 2026.

Most people have no idea.

The ones who do are already building.

1. anthropics/skills
Anthropic's official Skills repo.
The exact patterns Anthropic uses internally to extend Claude.
→ http://github.com/anthropics/skills

2. openai/openai-agents-python
OpenAI's official multi-agent framework.
26K+ stars. Same SDK their own engineers use.
→ http://github.com/openai/openai-agents-python

3. google/adk-python
Google's Agent Development Kit.
Build and deploy agents the way Google does internally.
→ http://github.com/google/adk-python

4. anthropics/courses Free courses straight from Anthropic. Constitutional AI. Prompt engineering. Agent design. → http://github.com/anthropics/courses

5. openai/openai-cookbook OpenAI's production recipes. RAG, evals, fine-tuning, agent loops — all working code. → http://github.com/openai/openai-cookbook

6. google/generative-ai-python Google's official Gemini SDK. Direct access to the models powering Google's own products. → http://github.com/google/generative-ai-python

7. anthropics/claude-code Claude Code. Official repo. The AI coding tool running inside FAANG, OpenAI, and Anthropic itself. → http://github.com/anthropics/claude-code

8. openai/evals OpenAI's LLM benchmarking framework. The exact evaluation infrastructure they use in-house. → http://github.com/openai/evals

9. google-research/google-research Google Research's official code dump. ML, NLP, vision — working implementations across all of it. → http://github.com/google-research/google-research

10. anthropics/anthropic-cookbook Anthropic's working notebooks. Real production patterns for building with Claude, from the team itself. → http://github.com/anthropics/anthropic-cookbook

Here's what nobody says out loud:
The three companies fighting for trillions in AI dominance are quietly handing you their weapons for free.

No Microsoft contract.
No OpenAI API deal.
No Google enterprise license.

Just a laptop, a weekend, and a git clone.

You don't need to be at a lab to build like you're at one.

Most people will scroll past this. The ones who don't will compound.
